DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 20, drawn to a method for acquiring information in relation to a device and a plurality of materials including the steps of irradiating a pulsed primary ion beam onto a surface, conducting mass-analysis of secondary ions via time of flight, and reconstructing analyzed results obtained by conducting mass-analysis to form two-dimensional information, classified in class 702, subclass 22.
- II. Claim 19, drawn to drawn to a method for analyzing biological-related material disposed on a chip including the steps of irradiating a pulsed primary ion beam onto a surface, conducting mass-analysis of secondary ions via time of flight, reconstructing analyzed results obtained by conducting mass-analysis to form two-dimensional information, and conducting component analysis of the biological-related material, classified in class 702, subclass 19.

The inventions are distinct, each from the other because:

The invention of Group I is unrelated to the invention of Group II thus posing an undue search burden if searched together. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of

Art Unit: 1631

operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions of Group I and II both require the steps of irradiating a pulsed primary ion beam onto a surface, conducting mass-analysis of secondary ions via time of flight, and reconstructing analyzed results obtained by conducting mass-analysis to form two-dimensional information. In contrast, however, Group II requires the additional method step of conducting component-analysis of biological-related material of a necessary portion contained in the obtained two-dimensional image on the bases of the mass spectrum information of said necessary portion. This additional step is not required in Group I and outside the scope of the claimed invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
